**Subject:** OR CZARA: Draft Landslide Review  
**Attachments:** OR CZARA Reference Tracking (062314 landslides).xlsx

Hi all,

Attached please find a copy of the reference review for the landslide comments completed to date (draft for Task 5). We have some more references to obtain and/or review for accuracy, but quite a few are addressed. And below is some information regarding color coding/notes/questions.

Hopefully this provides some useful information for the landslides call tomorrow (we will continue to move forward, but wanted to share the current version to keep things moving forward). Also, please note, if you all still have comments on the format of the tracking tables, we can definitely update. This is a good time to make changes.

Thinking forward...

Jenny, do you have a timeline for providing a list of references for the pesticides comments? Even a preliminary list can get us started on those.

Thanks, Amy

#### Key/Coding:

- Chris provided some summary comment tables that had red/blue font. When these were inserted to the spreadsheet, the font color was maintained consistent with the file from Chris.
- When new comments were added (not in "Coded" spreadsheet or info from Chris), included comment # and "-?" in comment code.
- Where multiple references for the same comment, these are included on separate rows and comment is repeated, but shaded in light grey.
- Where we have not yet obtained a full reference to review or there is a question on the accuracy of the citation provided, the citation is shaded in yellow.

#### Notes:

- Letters 57 and 77 have been included for landslide comments only...other references in those letters were not added to the "working tab".
- Same as above for the response letter from the State.

#### Questions:

- If a comment includes a reference and that specific reference includes a citation, should we also obtain that citation and verify the accuracy? This occurred in the Oregon Wild letter (#58) as well as a declaration letter in the NWEA letter (#57).
- In regards to the last bullet in "key/coding" above, how much should we pursue references if the provided citations do not appear accurate? This will likely require some discussion, but we wanted to bring it up.
